

Background and Context Paragraph

Sunday, 2 May 2021 6:00 PM

For my final project, I am focusing on the Flood Risk Management in Lagos, a coastal city in Nigeria. I have to identify the streets that require drainage construction and those that do have drainage channels but are currently blocked by solid waste due to improper disposal. With the use of computational-thinking and an online Lagos residential report platform, this data would be gathered in order for the state public health ministry to plan, budget and schedule fixing the drainage systems against the next coming rain seasons to prevent flooding in the events of heavy rainfall.
